WinPids® 7.0

LEADER
IN DIGITAL SIGNAGE

WinPIDS keeps your passengers on track, displaying arrival or departure information for all your system's routes on clear, readable LED or LCD displays.

WinPIDS is used in bus and rail stations across the country to give transit authorities the ability to easily manage their routes and display expected times to their passengers. The solution can integrate with automated vehicle tracking systems to update expected departure times or accept updates by authority staff through a simple web interface. WinPIDS supports distributed servers to drive multiple stations and automated server failover should a server suffer a hardware failure during operation.

INFAX, INC.
4250 River Green Parkway Suite D
DULUTH, GA 30096
E: SALES@INFAX.COM   F: 770-209-0671

FEATURES

- Manage scheduled routes through a simple web interface or update status information with an automated serial or XML feed
- Integrates with transit authority website through data export of Infax hosting of route status information
- Easily send operational messages to all displays in a single station or system wide
- Customized page layouts consistent with the authority's branding
- Create custom advertisement displays with integrated digital signage suite

ABOUT INFAX · For more than 45 years, Infax has been helping patrons navigate public spaces. Our systems provide our clients with capabilities to communicate vital information in real time. With thousands of displays nationwide our solutions have become an integral fixture in the judicial, healthcare, and transportation markets. Infax remains committed to being the most reliable and effective solution for information distribution.

WinPIDS does more than just track departure times. The system can display transit authority messages on policy or fare changes, upcoming public hearings, and other public announcements. WinPIDS supports displaying of multiple languages, integration with audible public address systems, and automated message generation. WinPIDS is a purpose-built passenger display system, offering far more integration, power, and flexibility than an off-the-shelf digital signage package.

With optional interfaces, WinPIDS can display upcoming weather forecasts, local news headlines, or any other information available through an RSS feed. With our optional Engage packages, authority staff can manage a network of displays providing agency announcements, promoting local events, displaying advertising, or change the look and feel of any display.

Our design staff will work with your transit authority to build pages that are perfect for your system and your passengers. Infax will match your pages to your trip frequency, your display size (or sizes), and your system's colors, logos, typefaces, and other branding. We can integrate trip information with your authority's website, allowing passengers to check on trip status from their computers, smartphones, or tablets, from inside the station or the comfort of their home or office.
